

## **Inverted Profile Pavement Marking System**

Standard Inverted Profile

High Contrast Inverted Profile

Audible Inverted Profile

**A motorist is 4 times more likely to become a fatality driving at night. Add wet conditions and you increase the probability of a dangerous situation at best.**

**GulfLine's Inverted Profile Pavement Marking System provides superior retro-reflectivity to safely guide motorists in all weather conditions.**

**GulfLine's durability and value make it the material of choice on either concrete or asphalt roadway surfaces.**

*GulfLine provides unsurpassed pre-sales support, resulting in unparalleled project success.*

## **GulfLine Inverted Profile Marking System offers:**

**Superior Retro-Reflectivity:** The GulfLine profile system incorporates technology that produces retro-reflectance two to four times greater than other pavement markings. Our system minimizes vehicle hydroplaning and produces a stripe that remains visible regardless of rainfall rate or fog by allowing water to drain from the road surface.

**Durability:** GulfLine's inverted profile is one of the brightest and most durable pavement marking systems on the market today. Our system bonds perfectly to concrete or asphalt, and is easily adapted to most motorized striping equipment. In addition, GulfLine offers a 3 to 5 year reflectance warranty for the Inverted Profile pavement marking system.

**Safety:** A motorist is much more likely to have an accident at night or in wet weather conditions. The GulfLine audible inverted profile produces a distinctive noise and perceptible vibration when driven over, alerting motorists that they have driven out of their lane or off the roadway. In addition, our pigment and solvent free formulations are environmentally safe. GulfLine offers 4" or 6" Edgeline or Multi-Lane Centerline, with Audible feature available.

***GulfLine systems have been used throughout the southeastern area of the country for many years in such states as Florida, Mississippi, Tennessee, Alabama, Arkansas, Louisiana and Texas since 1993.***

### **How it works:**

GulfLine's Inverted Profile does not allow water to accumulate against the edge of the stripe. Water has a surface tension and wants to "sheet" across standard thermoplastic striping. This "sheeting" does not allow the headlights to reflect off of the glass beads in standard thermoplastic.
